

What is *that*, Doctor?

That is a forklift. It is used to move boxes that are too heavy for people to move on their own.

What is in the boxes?

Well you see Adam, as workers clean up the Nevada Test Site, different types of garbage are created.

For example, the special suits that workers wear when they are doing their jobs cannot be put into regular trash cans.

Instead, when workers are done they put the garbage in special cans and then put those cans in large, metal boxes.
